Are you interested in leading a group of talented environmental scientists that strive to improve watershed health in Austin primarily through monitoring, data analysis, applied research projects, and the identification, development, and testing of solutions that help us understand and address the mechanisms that degrade the health of our watersheds?

Are you passionate about meaningful leadership that believes in human intrinsic motivation and seeks to potentiate the talents and growth of those in the team?

Do you have talent in bringing people together, building networks and partnerships that collaborate to solve complex problems?

If you answered YES to these questions…this position may be for you. The Watershed Protection Department in the City of Austin has just posted a job opportunity to hire the Applied Watershed Science Section Manager: [https://www.austincityjobs.org/postings/119181](https://www.austincityjobs.org/postings/119181)

Our ideal candidate has

- Experience in coordinating diverse and multidisciplinary research teams that propose, ideate, design, and implement scientific research relevant to watershed function.
- Experience and training in the development and implementation of strategic planning for working groups.
- Educational background with strong emphasis in ecology, hydrology, biology and other natural sciences.
- Experience and training in leadership skills and project management.
- Experience in building productive, collaborative networks across multiple working groups to improve decision making, problem solving, and complex solution implementation.
