Undergraduate education should be experiential, and environmental science research can be used to teach a range of career useful skills.

When teaching and research are the same, faculty and students become collaborators, not antagonists.

Our students report improved confidence and motivation.

We help STEM students graduate.

For every 100 students who enter UT intending to get a science degree, on average 17 more will graduate if they participate in FRI.

For every 100 students who graduate, on average 23 more will earn a STEM degree if they participate in FRI.

When teaching and research are the same, faculty and students become collaborators, not antagonists.
